DETAILED ACTION

1. The abstract of the disclosure is objected to because exceed 150 words.

Correction is required. See MPEP § 608.01(b).

Drawings

2. The drawings are objected to because it fail to label figures 5A-5D under "brief description of drawings".
3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "a surface resistance Rs" " Δt " "R/P" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1,5,14,19,21-22,25 are rejected under 35 U.S.C. 102(b) as being anticipated by Koji (JP-H08-223872A).

Regarding claim 1, Koji discloses a magnetizing method for obtaining a permanent magnet for a motor by magnetizing a material to be magnetized, wherein; an attenuation body (1) made of a conductive material is arranged in contact with or close to at least one the material which is nonconductive (9), thereafter a magnetization field is impressed, surface of at least a part of magnetic flux of the magnetization field penetrates both the attenuation body and the surface in contact with or close to the attenuation body simultaneously; and the magnetization is performed by a so-called pulse magnetic field which is rapidly intensified and thereafter weakened with respect to elapse of time.

Regarding claim 5, Koji discloses the material is a Nd-Fe-B bonded magnetic material.

Regarding claim 14, Koji discloses the attenuation body is formed integrally with a surface of the material to make up a coating layer.

Art Unit: 2834

Regarding claim 19, Koji discloses a resin layer is formed on the coating layer formed by the attenuation body.

Regarding claims 21-22,25, Koji discloses the permanent magnet is a driving magnet.
